

SALMAN .T. AL FARISYI

Full-Stack Engineer | Web Applications & Backend Systems

☎ +62 813-8087-7345 ✉ salmanthorIQ95@gmail.com 📍 Pangandaran, Jawa Barat

PROFILE

Full-Stack Engineer with a strong backend foundation, experienced in building web applications across **frontend interfaces**, **REST APIs**, **relational databases**, and **existing codebases**. Strongest in **Node.js** and **TypeScript**, with hands-on experience across **React**, **Next.js**, **Vue.js**, **Nuxt**, **Docker**, **Python**, and **PHP**.

EXPERTISE

Frontend

React
Next.js
Vue.js
Nuxt
HTML & CSS

Backend

Node.js
Express.js
NestJS
REST API

Languages

TypeScript
JavaScript
Python
PHP

Data

PostgreSQL
MySQL
SQL
ORM / Query
Builders

Engineering

Docker
Git
OpenAPI
Postman
Unit Testing

WORK EXPERIENCE

● **Susi Air | Backend Developer** Oct 2025 - Present
Aviation Company TypeScript • NestJS • Nuxt • MySQL • PostgreSQL • Docker • Git

Develop and maintain internal operational systems while contributing to new web application initiatives.

- Develop application functionality across APIs, business rules, validation, data processing, email automation, and scheduled workflows.
- Built Susi Environmental School as a dynamic web application using Nuxt/Nitro, Drizzle ORM, PostgreSQL, and MinIO, supporting configurable content, galleries, and news/blog publishing.
- Worked across frontend, server APIs, database design, and media storage, including multilingual content handling and SEO-friendly metadata and URLs.
- Containerized the application, database, and object storage using Docker with isolated service networking.
- Maintain and improve existing backend systems through database optimization, automation, and clearer application boundaries.

● **Laku6 | Full-Stack Developer** Jul 2024 - Oct 2024
Electronics Recommerce Next.js • Python • Symfony 2 • MySQL • PostgreSQL • Docker • Git

Contributed to existing web applications across frontend implementation, backend maintenance, and scheduled data-processing tasks.

- Implemented Next.js application pages from UX designs and integrated them into existing application workflows.
- Maintained Symfony 2 backend services, delivered small feature changes, and built Python scheduled jobs for reporting and large application datasets.

Rhapsodie.co | Project Manager

Feb 2024 – Jul 2024

Music Education Platform

Figma • GitHub • Trello • Miro

Led requirement discovery and technical planning for the redevelopment of an existing web platform.

- Produced SRD, user-role and feature flows, MVP scope, success criteria, and Definition of Done from business requirements.
- Created the initial web structure in Figma, evaluated legacy Laravel constraints, and coordinated implementation with a third-party development partner.

Kelola Teknologi Digital | Full-Stack Developer

Jan 2023 – Jun 2023

Software Development

TypeScript • Node.js • Express.js • Next.js • MySQL • Docker

Developed frontend and backend functionality across multiple client web applications.

- Built and maintained Qonnectic's document-management functionality, including application interfaces and hierarchical file-folder relationships in MySQL.
- Developed Prima Health Tracking System, transforming spreadsheet-based operational calculations into a web application and migrating its backend from a Next.js prototype to a dedicated Express.js service.
- Introduced N-Layered Architecture with feature-based vertical slicing, created the team boilerplate, and shared the approach through internal technical sessions.

Bangunindo Teknusa Jaya | Backend Developer

Aug 2022 – Jan 2023

Technology & Infrastructure Solutions

Python • Flask • PostgreSQL • Docker • Git

Developed backend APIs, integrations, and automation for telecommunications infrastructure systems.

- Built incident automation integrating monitoring events with Slack notifications and ISP/vendor support-ticket workflows.
- Developed and maintained Flask APIs and backend integrations supporting existing production systems.

Inovasi Solusi Internasional | Backend Developer

Mar 2021 – Aug 2022

Software Development

TypeScript • Node.js • Express.js • MySQL • Docker

Developed backend services supporting customer-facing registration, account, and KYC workflows.

- Migrated registration and onboarding functionality from Laravel to TypeScript/Express services while preserving existing business behavior.
- Implemented authentication, account management, user profiles, KYC, risk validation, authorization, and external screening workflows.
- Strengthened API quality through input validation, rate limiting, sanitization, unit testing, and OpenAPI documentation.

EDUCATION

SMK Islamiyah Widodaren | Software Engineering

Graduated 2014 • Average Grade: 8.14/10
